SURE, A LOT HAS CHANGED OVER THE LAST THIRTY YEARS, BUT JUST LIKE VINTAGE BIKES OF A BYGONE ERA, IT'S ALL GETTING BETTER WITH AGE.

PROGRESS ISN'T POSSIBLE WITHOUT CHANGE, AND OUR COMMITMENT TO PROGRESSION IS UNWAVERING.

WHAT STARTED IN 1989 WITH OUR ORIGINAL ISO®-GRIP AND HYPERCHARGER® AIR CLEANER HAS GROWN TO BECOME AN OUTLET FOR RIDERS OF NEARLY EVERY MAKE TO TRANSFORM THEIR RIDE INTO SOMETHING AS UNIQUELY INDIVIDUAL AS THEY ARE.

AND WE ARE NOT SLOWING DOWN. SADDLE UP FOR ONE HELL OF A RIDE AS WE CONTINUE TO BREAK GROUND TOWARD THE NEXT 30 YEARS.

JUST THE BEGINNING.

DETERMINE THE STYLE THAT BEST FITS YOUR APPLICATION:

P/N 4455 is recommended for Passenger use only; bracket design elevates board above existing peg location about 1-1/4".

P/N 7916 can be used for Driver or Passenger. Verify operation of existing shift lever & brake pedal will not be adversely effected by installation.

ISO®-BOARD CONVERSIONS

These kits include our finely chromed ISO-Boards and a cast bracket to connect the board to the slip-resistant splined adapter (sold separately).

4455	For Passenger, Chrome (pr)	\$224.99
7916	For Driver or Passenger, Chrome (pr)	\$204.99

Note: Boards should not be installed in place of a footpeg on a peg mount secured with a single fastener and no anti-rotation mechanism. The board will apply too much force and loosen the mount from the bike. Passenger applications utilizing P/N 7916 requires 1" clearance from bottom of footpeg mount and exhaust. Sits 1" farther out than stock. P/N 4455 is recommended for Passenger use only; bracket design elevates board above existing peg locations about 1-1/4". P/N 7916 can be used for Driver or Passenger. Verify operation of existing shift lever and brake pedal will not be adversely affected by installation.

WILD THINGS™ FUEL INJECTOR CONTROLLER

BY DOBECK PERFORMANCE

Adjust your fuel injection system to accommodate exhaust system, air cleaner, or engine component mods. The Wild Things® Fuel Injection Controller is load-based and takes into account the load the engine is under. Even though you may encounter the same throttle positions at the same RPMs in different riding situations, the engine's fuel requirement will not be the same because the engine is not under the same load. The Wild Things® Fuel Injection Controller module allows you to tune the fuel injection much the same way you jet a carburetor.

- The green "pot" functions like the fuel mixture screw & pilot jet on a carburetor to adjust light throttle operation
- The yellow "pot" functions like an accelerator pump on a carb, adding fuel as the throttle is opened
- The red "pot" functions like a main jet on a carb to add fuel on the top end
- The RPM "pot" adjusts at what RPM the green & yellow fuel addition stops, & the red fuel setting takes over, includes Scotchlock connectors allowing you to quickly & easily splice into your stock wiring harness.

TRAILER WIRING HARNESES

Safely and effectively apply the load from your trailer lighting to the battery and not to the rest of the bike's electrical system. Eliminate blown fuses caused by overloading stock lighting or accessory circuits. Our relay harness utilizes inputs from the motorcycle to direct power from the battery to the appropriate trailer lighting circuit.

- 5 Wire Plus 1: Our kits provide standard 5-wire output (run, brake, left turn, right turn, ground) plus a bonus wire that can be connected as needed to provide fused 12V power to the trailer for compartment lights or keyless entry systems that are wired independently of the trailers essential lighting.
- 5 to 4 Wire Converter: Plugs in and allows our Wiring and Relay Kits to power trailers requiring a 4-wire harness (run, left turn/brake, right turn/brake, ground). The bonus wire is still available to provide fused 12V power to the trailer for compartment lights or keyless entry systems that are wired independently of the trailers essential lighting. Includes 4-pin flat vehicle connector.
